

QUALITY POLICY

Since 1996, we have specialized in the supply and distribution of industrial valves, filters and fluid control products. We have a long history in the sector, and our equipment has been installed in plants around the world, offering countless hours of operation in critical services. Thanks to our accumulated experience, at **UNITECNO**, we began 2017 by taking on the challenge of **designing and manufacturing** our own line of filtering equipment.

At Unitecno, we **customize solutions**. We serve our customers with maximum commitment and flexibility to find the solutions that best suit their needs.

We know that quality is a fundamental component of our customers' success. That's why we only work with our own **high-end specialized products** or with the products of leading manufacturers in the domestic market with whom we have established exclusive and mutually collaborative agreements.

Our customers need maximum guarantees for their projects. For this reason, we work tirelessly to continuously improve all company processes and meet industry requirements, thus obtaining the approval of the most demanding customers.

All products manufactured and/or supplied by **UNITECNO** feature a comprehensive after-sales service that includes specialized technical support.
