

## QUALITY POLICY

Since 1996, we have been specialized distributors of industrial valves, filters, and fluid control products. We have extensive experience in the sector and equipment installed in critical services with thousands of operating hours in plants around the world. This trajectory has enabled us, since 2017, to consolidate at **UNITECNO** the development, design, and manufacturing of our own brand of filtration and pressure vessel equipment.

At Unitecno, we **customize solutions**. We support our customers with maximum dedication and flexibility to offer the most suitable technical alternative for each need, fostering trusting relationships based on professionalism and close attention.

Quality is an essential aspect of our customers' success. For this reason, we work exclusively with **high-end specialized products**, either our own or from leading manufacturers with whom we maintain stable agreements and technological collaboration.

Our customers demand the highest guarantees for their projects. For this reason, we strengthen our **commitment** to continual improvement, the effective management of risks and opportunities including those related to **climate change**, and the fulfillment of legal, regulatory, and stakeholder requirements. Likewise, we ensure the achievement and maintenance of approvals in highly demanding sectors.

For products manufactured and/or supplied by **UNITECNO**, we provide a comprehensive after-sales service that includes specialized technical support, promoting the operational reliability of the equipment throughout its entire lifecycle.
